INTRODUCTION

Gambling is the wagering of money or something of value (referred to as "the stakes") on an event with an uncertain outcome with the primary intent of winning money or material goods. According to Rose and Loeb (1998), gambling thus involves three elements: consideration, chance and prize.

The gambling industry is one of the oldest and most stable of all industries in the world. With the earliest six-sided dice dated to about 3000BC in Mesopotamia and the first known casino (Ridotto), established in Venice, Italy – 1638, the industry now has so much markets and sub-markets that cannot be exactly numbered.

At the dawn of digitalization, a lot of industries had to diversify their practices to suit/explore their user's new active environment (internet). For the gambling industry, this drift has paid off tremendously. Based on the analysis report presented by Statista in 2018, the online gaming market had a volume of 37.91 Billion USD in 2015, and this figure

was forecasted to increase to 59.79 Billion USD in 2020.

The market projection of the gambling industry can be exceeded, if a careful attention is given to the newly introduced digital-based market that seems to best suit gamblers. This market is known as the cryptocurrency-based market or the crypto-market. While we are celebrating the market capitalization of the gambling industry at 51.96 Billion USD in 2018, this market is comfortably boasting a market capitalization of 335 Billion USD with BTC alone owning about 149 Billion USD of the market cap (as of mid-March 2018). The level of transparency, anonymity, smart verification, absence of third party, availability and decentralized control of currencies are major features of the crypto-market that makes it the best spot for gambling. Unfortunately, so many currencies in the crypto-market are not making online gambling as seamless or compatible as it should be. This can be seen from the high process time, computing resources, transaction fees and the challenge of using different currencies for the few different gambling platforms on the crypto-market.

Having considered these limitations, ACE WINS therefore introduces a cryptocurrency-based solution that gives gamblers and other gambling platforms a better and more profitable place in this booming market or economy. The first focus is to provide a cryptocurrency that is solely for gambling with thorough consideration of the gambling industry's needs and demands. Being the crypto enthusiasts since 2011, the experience and ground reality, understood and acquired respectively; have tremendously fueled the success of the developed architecture for this project and its implementation. Another phase of this project

is to develop and integrate multiple games, to give gamblers diverse betting options and satisfy their dynamic interest levels.

THE CRYPTO-ECONOMY

In 2009, a cryptography-based currency known as bitcoin was introduced, with its first miner known as Satoshi Nakamoto. This cryptographic currency (popularly called cryptocurrency) is a digital asset designed to work as a medium of exchange using cryptography to secure the transactions and to control the creation of additional units of the currency.

This was introduced as an alternative to centralized currencies. State-defined or centralized currencies had been the only medium used for financial transactions. Its rigid nature, centralized system, enclosed controls, unavailability, exchange rates and lots more had always been a thing of concern for global investors.

Smart investors gave bitcoin a good grasp by not just using this alternative currency but also by investing in the market itself.

In just a few years, the system has experienced a sporadic growth such that it now has over 2000 decentralized currencies and its free, transparent and distributed ledger system, makes it a comfortable marketplace for global investors of today.

This technology has also grown so large that it is looking forward to substituting the traditional state currencies. As of November 20, 2018, the total market capitalization of cryptocurrencies was 153,448,530,841 (over 153 billion) USD with 2325 cryptocurrencies and

15589 markets. In comparison to a market cap of about 100 billion in June 2017, it is obvious that the market is experiencing a positive and exponential growth.

ACE WINS – ACE

ACE WINS (ACE) is an ERC 20 Token, developed exclusively for the Online Gambling. Initially ACE Tokens will be used as the utility token to play all the games from ACE WINS. Gradually over a period of time, ACE Tokens can also be used to play games from other Online Casino Houses. We are doing all that is possible to make the ACE Token a common Token for many of the online casinos. In simple terms, ACE Tokens will act as chips to play the games in the Casino. To add more value to this token, we have implemented HODL Rewards System into the contract, which rewards the token holders up to 21% a month as HODL Rewards if the rewards are compounded. The rewards will get credited automatically to the respective wallets after the completion of every block in the blockchain which sums to 21% a month approximately if you allow the rewards to compound.

Since ACE Tokens give you HODL Rewards, which add to the total supply, we limited the total supply to 9,000,000 tokens. Later, on hearing the feedback from the community, we burned 6,754,694 tokens (including the HODL rewards till November 29, 2018 13:30 HRS EST) and limited the total supply to 2,500,000 tokens to avoid inflation in the future.

To avoid infinite total supply of tokens on a longer run, we halved the HODL Rewards every year manually by calling a function from the Smart Contract. This is done as a preventive measure to avoid inflation over a period of time. Every action done on the smart contract will be announced prior to the community.

We will launch 3 to 1 Blackjack by December 2018 which can be played using ACE Tokens. Followed by that, Social Roulette, Graphic Roulette, Poker and Horse Race will be launched within 3 to 4 months.

We just don't stop with the above games. We also plan to bring Live Dealer Casino Games on board, in not so distant future, as outlined in our road map. With loads of games and interesting bonus offers and promotions, ACE WINS Casino is going to be massive.

ACE Tokens are expected to get listed on the leading exchanges by February 2019, after which it can be traded.

PROVABLY FAIR GAMES

All games of ACE WINS are 100% Provably Fair. The results are generated randomly. Players can verify their results with the third party.

BOUNTIES

800,000 ACE Tokens are allocated for the Bounties which includes affiliates, airdrops, youtubers, social network promoters and other promoters. Affiliates are rewarded with 10% of the sold tokens referred by them. A tremendous number of tokens are allocated for Youtubers and Social Network Promoters.

SUPPORT

A good digital-currency casino must have good customer support. In case of any queries, you can visit the FAQ section or contact the support via e-mail (info@acewins.io).

COINS SUPPLY AND DISTRIBUTION

ACE Tokens rewards the users with HODL Rewards up to 21% a month approximately if the rewards are compounded. Hence, to avoid the inflation, the total token supply is limited to 2,500,000 Tokens. The Crowd Funding is set to start on **Nov 24, 2018 and ends on Jan 31, 2019**. To this end, all the undistributed tokens/coins will be burnt after the Crowd Funding.

Distribution

-  **30%**
Bankroll for the games
-  **50%**
Development of future games
-  **20%**
Marketing & Promotions
**(Heavy promotion aimed towards
International Crypto Youtubers)**
